### Feedback — III. Linear Algebra

Help

**Explanation** 

You submitted this quiz on Fri 21 Mar 2014 11:30 PM PDT. You got a score of 5.00 out of **5.00**.

#### **Question 1**

Let two matrices be

$$A = egin{bmatrix} 1 & -4 \ -2 & 1 \end{bmatrix}, \qquad B = egin{bmatrix} 0 & 3 \ 5 & 8 \end{bmatrix}$$

$$B = \begin{bmatrix} 0 & 3 \\ 5 & 8 \end{bmatrix}$$

What is A - B?

1	1 ]
$\lfloor -3 \rfloor$	-7

Your Answer

$$\begin{bmatrix} 1 & 7 \\ 7 & 9 \end{bmatrix}$$

$$\begin{bmatrix} 1 & -7 \\ -7 & 7 \end{bmatrix}$$

$$egin{array}{ccc} egin{bmatrix} 1 & -7 \ -7 & -7 \end{bmatrix}$$

# **Question 2**

	$\lceil 5 \rceil$
Let $x =$	5
Let $x$ —	2
	7

What is 2 \* x?

Your Answer	Score	Explanation
$ \begin{bmatrix} 10 \\ 10 \\ 4 \\ 14 \end{bmatrix} $	1.00	To multiply the vector x by 2, take each element of x and multiply that element by 2.
$ \begin{bmatrix} \frac{5}{2} \\ \frac{5}{2} \\ 1 \\ \frac{7}{2} \end{bmatrix} $		
$\begin{bmatrix} \frac{5}{2} & \frac{5}{2} & 1 & \frac{7}{2} \end{bmatrix}$		
[10 10 4 14]		
Total	1.00 / 1.00	

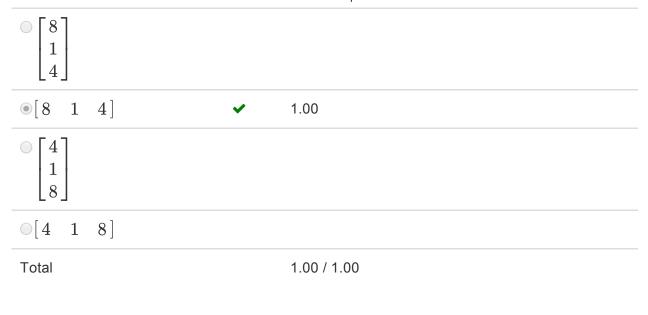

# **Question 3**

Let u be a 3-dimensional vector, where specifically

$$u = egin{bmatrix} 8 \ 1 \ 4 \end{bmatrix}$$

What is  $u^{\mathrm{T}}$ ?

Your Answer Score Explanation

#### **Question 4**

Let u and v be 3-dimensional vectors, where specifically

$$u=\left[egin{array}{c} 3 \ -5 \ 4 \end{array}
ight]$$
 and  $v=\left[egin{array}{c} 1 \ 2 \ 5 \end{array}
ight]$ 

What is  $u^T v$ ?

(Hint:  $u^T$  is a 1x3 dimensional matrix, and v can also be seen as a 3x1 matrix. The answer you want can be obtained by taking the matrix product of  $u^T$  and v.)

# **Question 5**

Let A and B be 3x3 (square) matrices. Which of the following must necessarily hold true?

Your Answer		Score	Explanation
$lue{}$ If $C=A*B$ , then C is a 6x6 matrix.	✓	0.25	Since A and B are both 3x3 matrices, their product is 3x3. More generally, if A were an $m\times n$ . matrix, and B a $n\times o$ matrix, then C would be $m\times o$ . (In our example, $m=n=o=3$ .)
ightharpoonup If $C=A*B$ , then C is a 3x3 matrix.	<b>✓</b>	0.25	Since A and B are both 3x3 matrices, their product is 3x3. More generally, if A were an $m\times n$ . matrix, and B a $n\times o$ matrix, then C would be $m\times o$ . (In our example, $m=n=o=3$ .)
(A*B)*A = A*(B*A)	<b>~</b>	0.25	This true by the associative property of matrix multiplication. More generally, $(A*B)*C=A*(B*C), \text{ and here we have just set } C=A.$
$\blacksquare A*B=B*A$	~	0.25	We saw in the lecture that matrix multiplication is not commutative in general.
